**DETAILED ACTION*****Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Puziol et al. US Patent No. 6,108,777.

Admitted prior art in Figure 2 discloses a phase shifted binary transmission encoder as recited in the claims except the flip-flops being transparent D Flip-Flops.

Puziol et al. teaches that transparent d-type latches (D Flip-Flops) have level-sensitive clock inputs and thus reduces the effort required to avoid race conditions in design restriction (Col. 6, lines 42-54).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to use transparent d-type latches because such a modification would have advantageously provided the benefits stated above (Col. 6, lines 42-54).

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Kojima et al. US 20020196064.

Admitted prior art in Figure 2 discloses a phase shifted binary transmission encoder as recited in the claims except the flip-flops being transparent D Flip-Flops.

Kojima et al. teaches a transparent D-type latch that provides a fast performance and low power consumption (paragraphs [0002] and [0003]) and that its functionality is suitable to the circuit of the admitted prior art (Para.[0002]).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to use transparent d-type latches because such a modification would have advantageously provided the benefits stated above.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prickett discloses a logic circuit having transparent d-type latches.

Wise et al. discloses an I/O system using transparent d-type latches.
